

ChildSafe411 was created by a Software Engineer and a Deputy Sheriff who put their skills and knowledge together to give parents a user-friendly iPhone application to help keep a child's information close at hand should it be needed for both emergency and non-emergency situations.

ChildSafe411 is a database that assists parents with storing and organizing pertinent child data in one safe and convenient location. There are multiple customizable screens that can be used to enter a wide range of information such as a child's vital statistics, passport number, school information or even a birthday wish list! Once a child's information is entered, parents no longer have to worry about remembering a child's social security number at the doctor's office or a child's shoe size when shopping. In the case of an emergency, such as if a child becomes missing, the information stored in this application can be given to Law Enforcement quickly to help in the search for a child. Parents of missing children are often frantic and have trouble remembering basic information or have trouble locating a recent picture. With this application, all of the necessary information can be retrieved for Law Enforcement quickly, including a photo. In fact, the application will have e-mail capabilities so that the information can be e-mailed to Law Enforcement instantly.

Other ChildSafe411 Features:

- ❖ Keep a database of detailed records of statistics about your child, including their name, height, weight, eye color, hair color, etc.
 - ❖ Enter any unique characteristics, such as a birthmark, scars, medical conditions, medicines, etc.
 - ❖ Using both your iPhone's built-in camera or your photo library, you can easily take a photo of your child and attach it to your child's profile in ChildSafe411 and always have an updated photo of your child.
 - ❖ Upload and Download your child's information from iPhone to website and from website to iPhone
 - ❖ You can E-mail a detailed record about your child to anyone with just one tap of your finger in the case of an emergency. In non-emergency situations, you can simply email your spouse the shoe size of your child so when you are off to the mall, you will have all the information at hand to make even simple decisions!
- Blackberry and mobile versions of ChildSafe411 will be in late November 2009! Please visit ChildSafe411.com for more details.

From every sale of the ChildSafe411 iPhone App, we donate to the
National Center for Missing and Exploited Children
